

## IBM TSM Operations Center wish list:

- Ability to access OPC without system privileges (e.g. for monitoring purposes only)
  - There should be a feature to build custom views (e.g. Monitoring, Storage, Policy, ...)
  - First level support view (failed backup, event overview) – view only no changes available
- Integrating CMS into client installation package (selectable option)
  - GUI for configuring custom log files (client configs)
  - Using CMS in a clustered environment (MSCS)
  - CMS for all platforms (missing AIX, HPUX, Solaris)
- Detailed activity view by selecting processes or sessions
- Client schedules:
  - new task – delete a schedule
  - client event overview link (server completed tasks with appropriate filter)
  - modify schedule
    - add or delete association
    - modify action etc.
- Services:
  - Add, delete, update management classes/policy sets
  - Activate policy set
- Storage Devices
  - Tape functions (checkin, checkout)
  - Library functions (audit)
  - Show drives, paths
  - Define, delete, modify paths, drives, libraries
